## Abstract

Economist scientists have been interested in competition for a long time ago, where they give it a definition, forms and effects. However, attention of strategic competition does not appear until in the second half of the twentieth century as the beginning of the market liberalisation and development of transport and communication. Michael Porter is considered one of the famous specialists in the strategic competition field; he identified five forces, which would affect a company's behaviour in a competitive market. These include the following: The rivalry between existing sellers in the market, the threat of substitute products becoming available in the market, the potential threat of new sellers entering the market, the power exerted by the customers, and the impact of the suppliers on the sellers. Based on these forces is determined the intensity of competition in the sector concerned. Whatever the degree of competition in the sector, the companies have three choices: Build a competitive strategy based on reducing costs compared to its competitors to sell at low prices, or either creating a differentiation product compared to others in order to sell it at a higher price, or orienting their efforts to a small market. Each of the three strategies requires materials and humans capabilities to ensure the success of the company in achieving its objectives.

Islamic banks are financial institutions that provide services banking to their customers according to Islamic law. Began as an experiment in the sixties of the last century, but later increased in number and spread in many countries. From our study, we conclude that whatever the degree of competition in the market of Islamic banks, the majority of them use the differentiation as the main competitive strategy, based on Islamic law and commitment to community service add to focus on customer needs, quality, use of modern technology and innovation. However, we have noted the limited uses of focus strategy and the absence of the cost leadership strategy which contributed to the higher costs of these banks and the limited of their profits. Finally, the competition will be increased in the sector of the Islamic banks, which requires them to increase their competitiveness by addressing its internal problems integration and cooperation.

### **Key words:**

Competition, Competition environment, Model of fifth forces, Strategies competitions, Islamic banks, competitive markets, non-competitive markets, Islamic law, Social solidarity, Competitiveness.

## Résumé

Les économistes sont intéressés depuis longtemps par la concurrence, car la concurrence parfaite est l'état naturel de l'économie capitaliste. Mais les stratégies concurrentielles n'ont pas attiré l'attention jusqu'à la seconde moitié du XXe siècle au début de la libéralisation du marché et l'évolution du transport et de la communication. Michael Porter est parmi des spécialistes les plus célèbres au domaine des stratégies concurrentielles, il a mentionné que l'entreprise est sous pression de cinq forces : La concurrence intra sectorielle, la menace des produits de substitution, la menace d'arrivée de nouveaux concurrents, le pouvoir de négociation des clients, et le pouvoir de négociation des fournisseurs. L'intensité de la concurrence dans le secteur concerné est déterminée sur la base de ces forces. Quelle que soit l'intensité de la concurrence, l'entreprise a le choix entre les trois stratégies concurrentielles suivantes : Soit construire une avantage compétitive fondée sur la réduction des coûts par rapport à ses concurrents pour vendre le produit à bas prix, soit créer un produit différent par rapport aux autres afin de le vendre à un prix élevé, ou orienter leur effort vers un segment du marché. Chaque stratégie nécessite des capacités matériaux et humaines pour assurer l'entreprise à atteindre ses objectifs.

Les banques islamiques sont des institutions financières qui offrent des services bancaires à ses clients conformément à la sharia. Lancé à titre expérimental dans les années soixante du siècle dernier, mais plus tard ont connu une augmentation en nombre et établie dans nombreux pays y a compris quelques pays occidentales. Dans notre étude, nous concluons que quelque soit le degré de concurrence dans le marché des banques islamiques, la majorité d'entre eux utilise la différenciation comme la principale stratégie concurrentielle, basée sur le respect de sharia, la Solidarité sociale, tenant compte les besoins des clients, la qualité, l'utilisation de la technologie moderne et de l'innovation. Ainsi, nous avons noté l'utilisation limitée de stratégie de focus et l'absence de la stratégie de domination par les coûts; ce qui contribue à l'augmentation des leurs coûts. Enfin, la concurrence sera augmentée dans le secteur des banques islamiques ce qui les oblige à accroître leur compétitivité par la résolution de leurs problèmes internes et de chercher de l'intégration et la coopération.

### Mots clés :

La concurrence, Environnement concurrentiel, Modèle de cinq forces, Stratégies concurrentielles, Banques islamiques, Marché concurrentiel, Marché non concurrentiel, Sharia, Solidarité sociale, Capacités concurrentielles.
